*"If Justin doesn't know something he needs to know he'll buy a book and know it the next morning."
- Lynn Bennett*

Justin is the software architect who builds enterprise applications that can grow and adapt to changing business needs. With over 5 years of designing, building, and maintaining software with the .NET framework, Justin is the creator of SCOUT (Streamline Customer Order and Unit Tracker), and configures and manages the SQL Server data back end for STS. He also has an extensive background in the IT field and is no stranger to building and configuring a full IT infrastructure.

Justin has a passion for development and keeps up with technology advancements in order to provide more value to our clients. He is self taught, and has built his skill set through a thorough understanding of the floor application. He utilizes all the resources around him to provide value to the company and customers. He is driven to implement proven methods and organization which provide a calm to the storm.
