"Laurie is a natural leader with the ability to bring unclear goals into focus and develop plans for realization of them. She can facilitate a diverse group toward a common cause, and she does not believe there is anything that cannot be done."

- Lynn Bennett

Laurie has spent over 20 years in manufacturing, where a self-motivated career path has given her a broad range of support skills. Her diversity ranges from hands on rework and repair of electronics assemblies to quoting and managing the business process of an awarded job. In addition to years of assembly and training others for assembly, Laurie has trained upper level management in business excellence tools and applications, managed large quote projects to win customers, and run departments for the sole purpose of recovering low performance to meet business goals.
