"Lynn has always been a man of action. His straightforward business approach allows him to get to the heart of an issue quickly, and intuitively know the right course of action!"

- Dave Cunningham

Lynn is a senior consultant and the president of Streamline Technical Services. Involved in the field of tape drive technology for over 15 years, with a wealth of experience in customer support, cost management, quality and production control. Lynn has served both large and small companies in a business and leader capacity. Major accomplishments include increasing Exabyte sales and support revenue by 40% while acting as Manager of Service Sales and Accounts Management. Lynn was also heavily involved in the engineering of new processes to increase reliability for mission-critical applications through preventive maintenance.

Lynn started STS with the principal idea of working as partners with tape suppliers and manufacturers, not competitors. This philosophy has proven cost effective for all involved and STS has grown from 3 employees in February 2001 to 96 employees in September 2008, all with no sales, marketing or advertising, just word of mouth.
